

Karuna S. Chibber, DrPH, MS, Research Fellow.

Karuna Chibber is a public health social scientist at ANSIRH. Her research interests include gender inequalities and women's health, particularly intimate partner violence and its impact on women's reproductive, sexual, and maternal health; and developing innovations to improve health care access, quality of care, and service delivery by improving health systems. For the past ten years, she has conducted community-based research in India examining the links between gender inequalities and women's reproductive and sexual health. Dr. Chibber's current research focuses on the status and quality of relationships in the United States between pregnant and parenting women and their intimate partners and on the impact that being denied an abortion has on women's experience of intimate partner violence. Dr. Chibber received her undergraduate degree in Economics from Delhi University, India; an MA in Economics from Tufts University; a Masters in Health Sciences from the Johns Hopkins University Bloomberg School of Public Health; and a Doctor of Public Health from the University of California, Berkeley. Phone: 510-986-8963.
